

Natalie Spiva

Spokane, WA · acreationos.org · natalie.acreationos.org · github.com/spivanatalie64 · gitlab.acreationos.org

Regarding my name: prior to 2026, legal and educational records may reference Johnathan Spiva. I have since transitioned. My name change hearing was January 30th. Please update any records accordingly.

Profile

Systems architect and infrastructure engineer. I co-founded **AcreectionOS**, an Arch Linux distribution, and built the whole thing from the ground up — the OS builds, the website, the CDN, the monitoring, the package repos, the AI assistant, and the filesystem it runs on. I have been writing code since I was 7, building custom Android ROMs, and I have not stopped since. I manage roughly 92 DNS records, 11 Cloudflare Workers, 3 page rules, a self-hosted GitLab instance, and a mirror network — all on a free-tier Cloudflare plan, because I believe in doing more with less.

Technical Skills

- **Operating Systems:** Arch Linux, kernel customization, Cinnamon/X11/Wayland/XLibre, systemd, GRUB, mkinitcpio, ISO generation pipelines
- **Infrastructure:** Cloudflare (Workers, DNS, DDoS, edge caching), self-hosted GitLab, Nextcloud, Mastodon, Discourse, Caddy, Varnish, custom monitoring
- **Languages:** C, Rust, Python, Bash, TypeScript, Svelte, HTML/CSS, ScrapeC (my own language)
- **Misc:** Flatpak packaging, CI/CD, Git, filesystem design (YAcFS), kernel modules, USB flasher tooling, AUR packaging

Experience

Co-Founder & Infrastructure Lead — AcreectionOS

2023 – Present

Built alongside Darren Clift. I handle infrastructure, tooling, and the web stack.

- Co-created and maintain a full Arch Linux distribution with 12 desktop editions: Cinnamon (X11, XLibre, Wayland), GNOME, MATE, Plasma, Hyprland, XFCE, Sway, i3, Openbox, and a 32-bit variant. Each edition has its own build pipeline, ISO artifact, and download page.
- Designed and deployed the entire web ecosystem: acreationos.org, ISO builder, Git tracker, AI assistant (AIDEN), news tracker, blog, newsletter, and USB flasher. The site handles all API routing through Cloudflare Workers, with 11 active scripts managing authentication, rate limiting, caching, and proxying.
- Maintain 99.9% uptime across all services using a self-hosted stack behind Cloudflare's edge. Manage 92 DNS records, 3 page rules, and multiple subdomains including acreationos.org, iso.acreationos.org, darren.acreationos.org, and security.acreationos.org.
- Built a custom ISO pipeline that builds, compresses, signs, and distributes ISOs through a global mirror network. Added automated Internet Archive uploads for long-term preservation.
- Wrote YAcFS (Yet Another Common File System) — a copy-on-write filesystem. Also wrote JALK (Just Another Linux Kernel) as a learning exercise that turned into something real. Created ScrapeC, a programming language that tries to sit somewhere between C and Rust in terms of safety and performance.
- Developed FlatFree, a community Flatpak repository that accepts submissions from everyone — no gatekeeping, no review board, just automated CI and malware scanning.

Infrastructure Engineer — Personal & Open Source

2019 – Present

Self-hosted everything. Cloudflare as the edge. My hardware, my rules.

- Run a self-hosted GitLab instance (gitlab.acreationos.org) hosting 45+ projects across personal and organization accounts. Also host Nextcloud, Mastodon, and Discourse for the AcreectionOS community.
- Manage Cloudflare edge configuration including Workers routing, DNS (92 records), SSL/TLS, Caching, and DDoS protection — all on the free plan. Built custom analytics and monitoring using Cloudflare's API.

- Deployed and maintained a Mastodon instance, handling federation, moderation, and backup at the infrastructure level.
- Authored 50+ open-source repositories across GitHub and GitLab, spanning OS tooling, desktop environments, system utilities, web applications, and experimental projects.

Co-Founder — XeroLinux

2018 – 2021

- Co-founded the distribution and built the early infrastructure. Handled ISO builds, community management, and technical support during the initial release cycle.

Android ROM Developer — LineageOS / XDA Developers

2013 – 2020

- Started building custom Android ROMs at 7 years old. Contributed to the CyanogenMod and later LineageOS ecosystem for years. Maintained AUR packages and provided peer support on XDA.

Selected Projects

A sampling of projects I have authored or co-authored. Full list available on my GitHub and GitLab profiles.

AcreetionOS — Distribution with 12 editions · **acreetionos32** — 32-bit i686 port · **AcreetionOS-Cinnamon-X11/XLibre/Wayland** — Desktop variants · **AcreetionOS-Mate/GNOME/Plasma-LTS/Hyprland** — More editions · **acreetionos-code.github.io** — Main website · **acreetionos-news-tracker** — Live news aggregation · **acreetionos-newsletter** — AI-written daily newsletter · **acreetionos-flasher** — Tauri USB flasher app · **AcreetionMediaWriter** — Fedora Media Writer fork · **acreetion-appstore** — Package storefront · **AcreetionOSCloud** — Cloud infrastructure · **aiden / aiden-desktop** — AI assistant framework · **FlatFree** — Community Flatpak repository · **yacfs-kmod / tools / replicate / metrics** — Filesystem stack · **jalk** — Linux kernel · **ScrapeC** — Programming language · **ace** — Git fork with workflow layer · **mdg / rettum / llehs-emong** — GNOME ecosystem forks · **OVSC + ovsc-core/sidecar/watcher/host** — Virtual server cloud · **Veskto** — Lightweight Discord client · **openrouter-tui** — Terminal AI client · **Trans_Tracker_101** — Tracking tool · **messengerpwat** — Messenger PWA · **DAN-Qwen3-1.7B** — Fine-tuned LLM · **qt-calculator** · **cinderfox** · **oglo** · **ISO** · **Linux-Mint-Ports** · **TrumpOS** · **ThunderOS** · **root-distribution** · **X11aw** · **calamares-config** · **ajs-compiler** · **spivanatalie64.github.io** · **darren** — Personal site for Darren Clift · **arttulos / arttulos-site**

Education

Meridian Technology Center — 2020 | GPA: 4.0

Stillwater High School — 2020 | GPA: 4.0
